Harrisburg, Pennsylvania

Gentlemen:

I understand the Hammermill Paper Company of Erie, Pennsylvania has intentions of disposing waste materials into the Bass Island Limestone. May I suggest this matter be given due consideration as to the possible damage that may be done to our position since our business relies on a natural mineral reservoir located in the Oriskany Sand.

I question the effects of this kind of disposal in this area in relation to our natural source of material and therefore I would like more information regarding this method of disposal and the effect it would have between the Bass Island Limestone and the Oriskany Sand. If by any chance this material should seep into the Oriskany Sand I feel it would fill the pores and seal off our natural supply or this waste material may dilute our material.

Any information you may have on this matter would be appreciated.

Sincerely,

Clayton E. Schulze
